

NONHOLONOMIC ROUTE PLANNING FOR DRIVERLESS RACING

Introduction

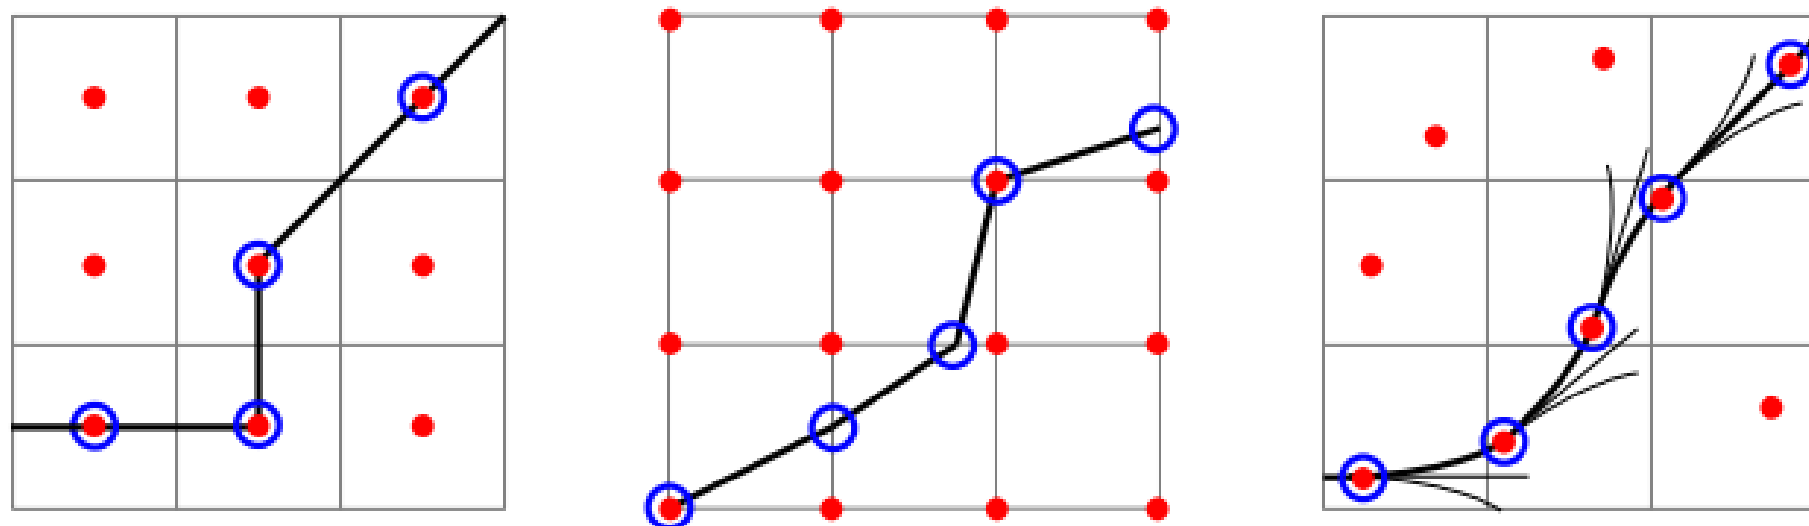

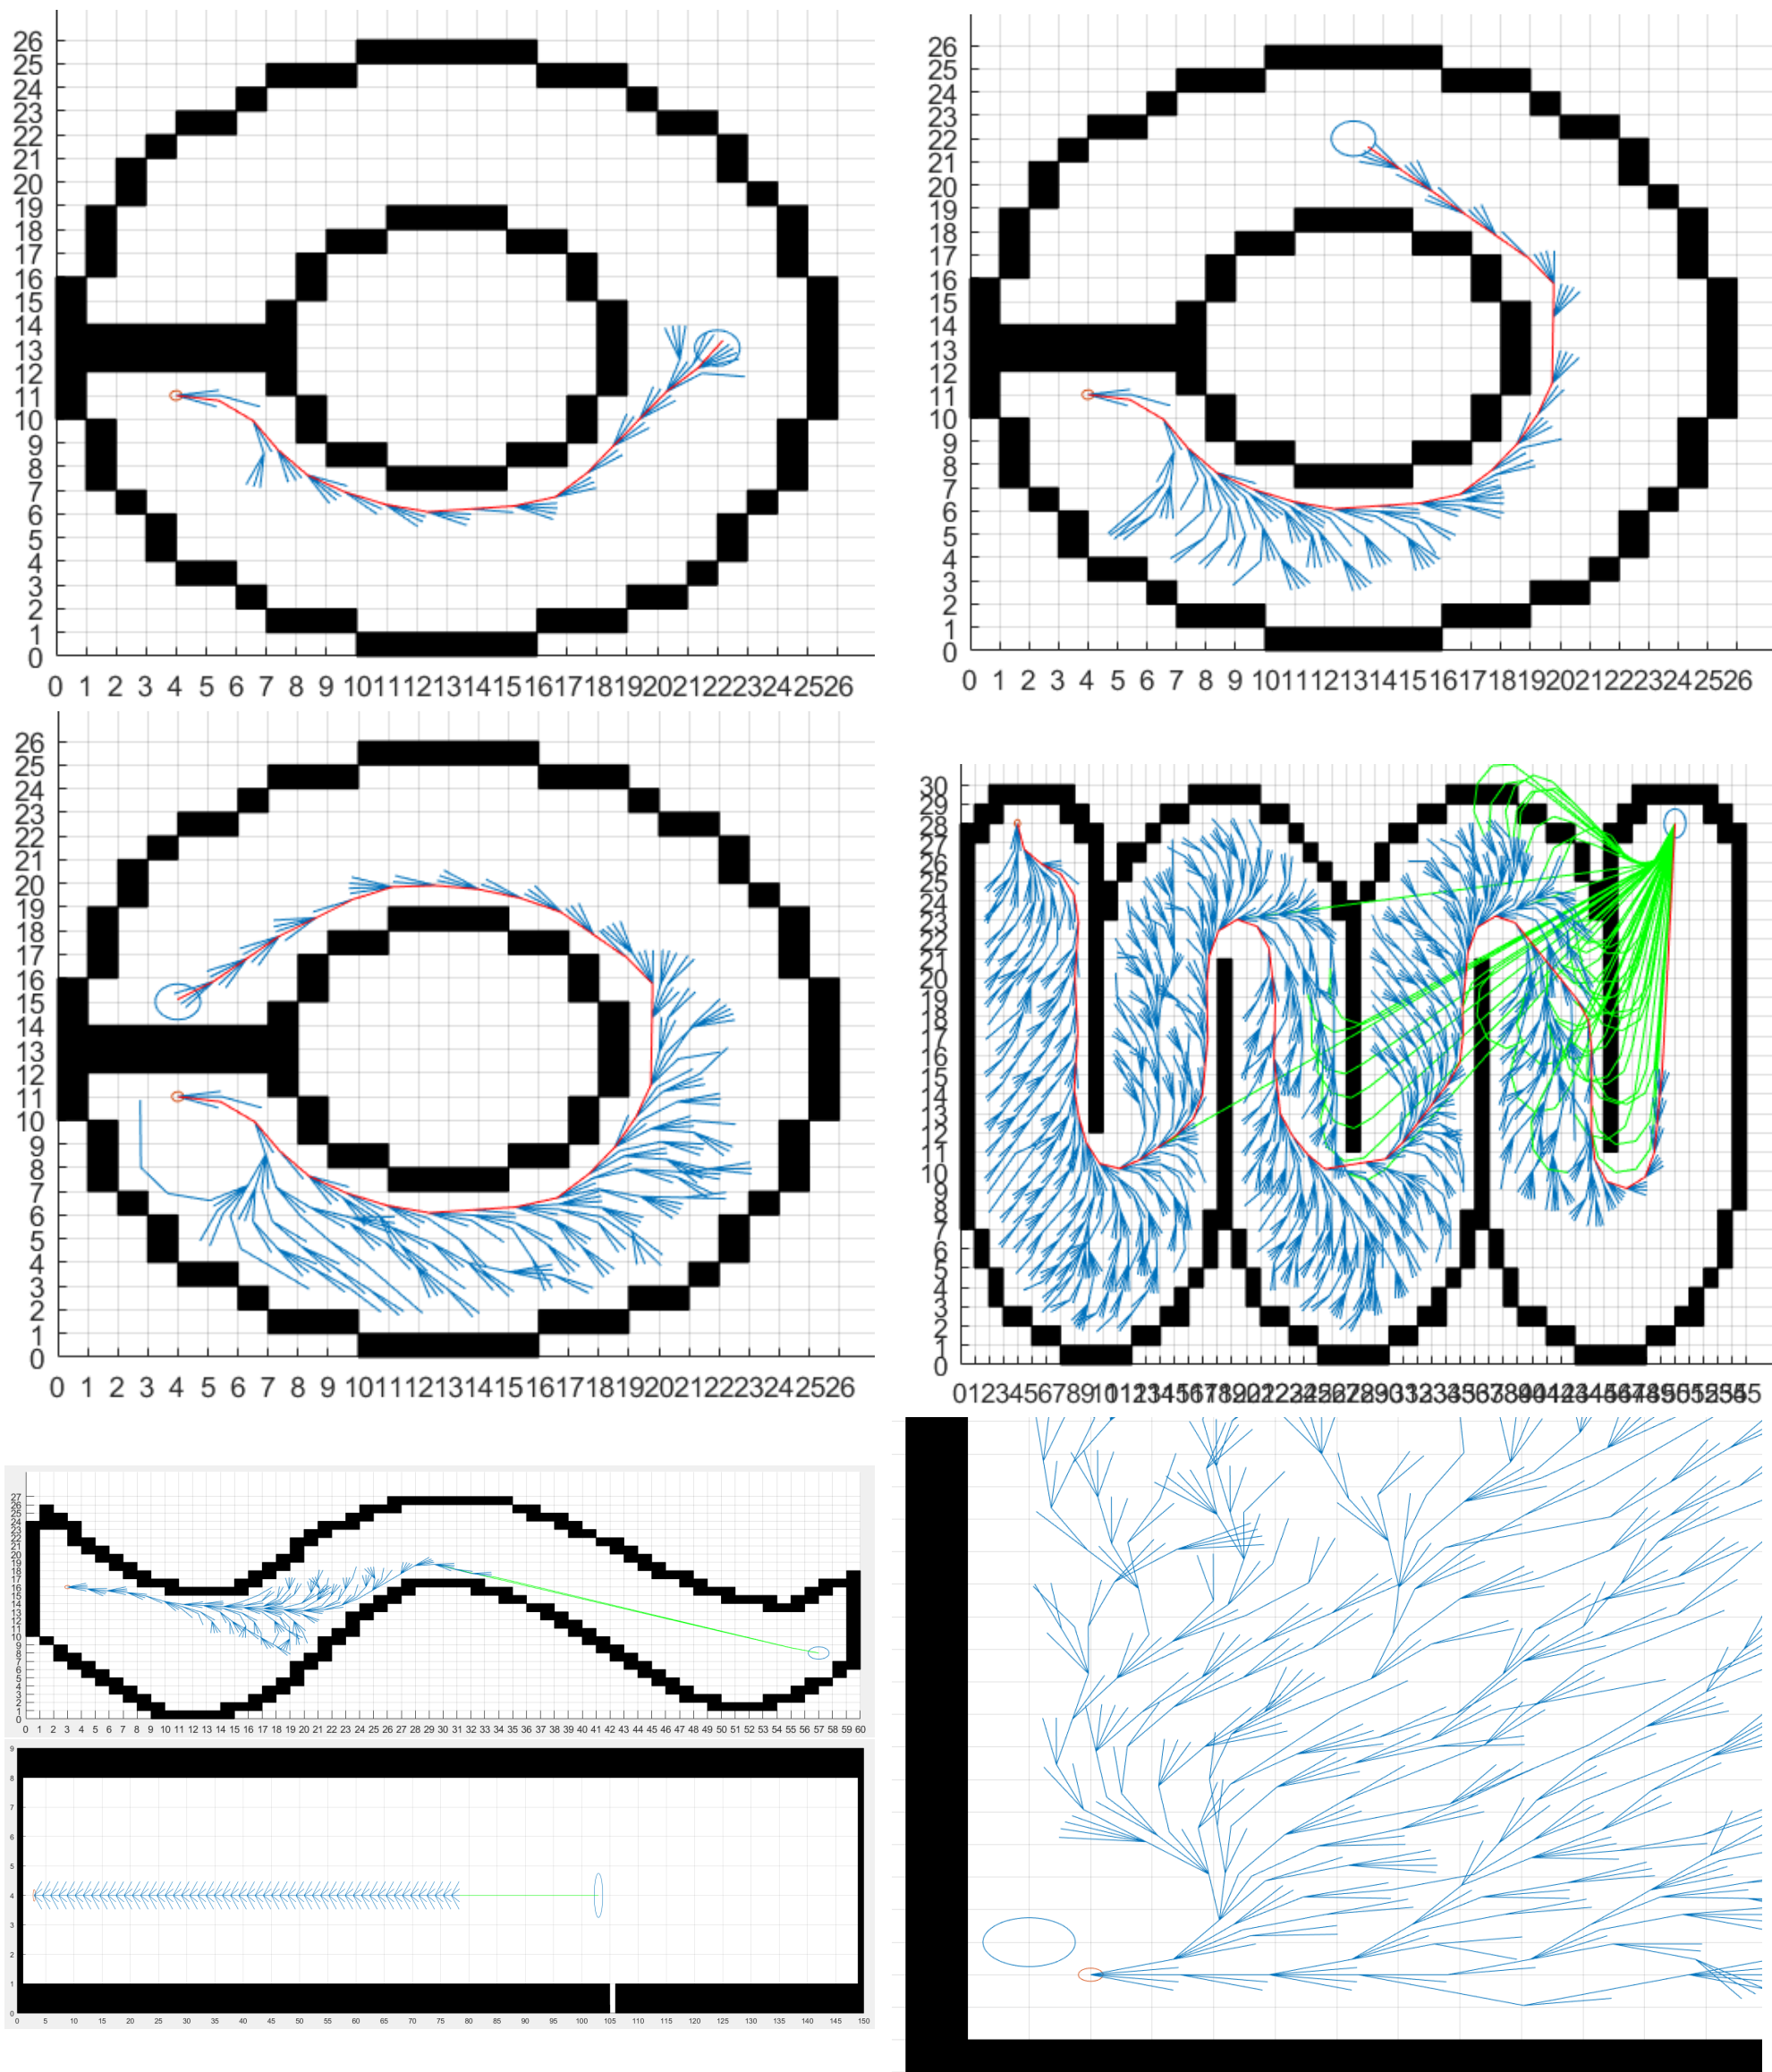

FIGURE 1: Comparison of search algorithms. Nodes are represented by the red dots.
Left: A*, centre: D*, right: hybrid-state A*. [4]

Hybrid-State A*

Path is composed of arcs subject to the following constraints:

- The distance travelled d has to be enough to exit the cell. For a cell of $d \geq \sqrt{2} \cdot s$ for a cell of size s .
- The curvature is restricted by the maximum vehicle steering angle α .

Results and Evaluation
